Geography Knowledge Map

Rivers

Why does the water flow the way it does in rivers, and why is the Amazon River so important to people and the planet?

The skills I need:

- Identifying physical characteristics
- Linking physical processes to human activity
- Collecting, measuring and analysing data

Climate	Weather conditions over a period of time.
Deposition	Rivers carry material such as sand, mud and rocks, then drops it in a new location.
Erosion	The process where the Earth's surface is worn away from its original site.
Meander	A bend or curve in a river.
Mouth	Where the end of the river flows into a lake, sea or ocean.
Physical process	Processes and features that are natural, not manmade.
River	A moving body of water flowing from the source to the mouth.
Source	Where a river or stream starts.
Tropical Biome	Hot, wet conditions near the equator.
