Computing Knowledge Map

Connecting Computers

How are computers connected and what are the benefits of networks?

The skills I need:

- Explaining ideas clearly
- Identifying how devices in a network are connected together
- Exploring the benefits of computer networks

Digital device	Tools that help a computer to process, store and display information.
Input	Things which put information into a computer.
Network	A way for computers to share information, files and data electronically.
Network switch	The device that connects multiple computers.
Output	The things sent out of a computer, ready to be used.
Password	A secret combination of letters, numbers and characters used to protect the user's identity.
